What is SR Car?

SR Car is a high performance coating specifically designed to eliminate unwanted sound and vibration. SR Car works by converting noise energy and vibrations into a low-grade heat, which is then dissipated throughout the applied surface.

General Properties: SR Car is water-based, non-toxic and VOC compliant. There are no harsh smells and, before curing, cleans up with water.

Adhesion: SR Car is designed as a “permanent” coating. The product has excellent adhesion to all metal and fiberglass surfaces. Proprietary components are added as “adhesion promoters” to help ensure its permanent adhesion. Adhesion is not affected by harsh cold or extreme heat. SR Car can withstand temperatures from -30°F up to 250°F.

Durability: Although SR Car dries to a hard surface, it retains excellent elongation. SR Car will not chip or crack with any expanding, flexing or bending of the substrate. SR Car cures virtually waterproof and is extremely resistant to gas, oil and most chemicals.

Flammability: SR Car is non-flammable. Should the product come into contact with flame, it is self-extinguishing.

Safety: Because of its water-based formula, SR Car meets or exceeds all environmental standards and is 100% non-toxic.

Application: SR Car applies faster and easier and penetrates where other traditional methods of damping cannot.

Clean Up: Spills and mistakes are easily taken care of with soap and water.
